TestNG

TESTNG

Test Grouping in TestNG

- Test Grouping : Grouping is a feature through which you can easily categorise your test cases based on requirement.
- User can assign any Group to TestCase by passing groups name to @Test Annotation.
  @Test(groups={"groupname"})

- User can maintain the execution of Groups via testng.xml file.
- After grouping in Selenium we can specify the include and exclude in testng.xml.
  <include> – It tells testng.xml that which group we need to execute.
  <exclude>- It tells testng.xml which group we have to Skip
