Find Elements in Selenium

Selenium: Selenium With Java Basics

- **Find Elements** : findElements() method which can return multiple elements matching with given locator, findElements() returns **List<WebElement>**.
- **Things to Remember About Find Element:**
 - FindElements() provide the whole list of all the elements matching the specified locator.
 - If the element doesn't exist or not available on the page then, the return value will be an empty list.
 - It will not throw 'NoSuchElementException' in case element is not present

Will see you in Next Lecture...

Thank you!

A close-up photograph of a hand holding a black marker, completing the word 'Thank you!' in a cursive script on a white surface. The hand is positioned on the right side of the frame, with the index and thumb fingers visible, holding the marker. The marker is black with a silver band. The text 'Thank you!' is written in a fluid, cursive style, with the exclamation mark being the final stroke. The background is a plain, light-colored surface.
