Set Test Dependency in TestNG

TestNG: Test Execution Engine

- **Test Dependency Order** : Dependency is a feature in TestNG that allows a test method to depend on a single or a group of test methods.
- TestNG allows you to specify dependencies either with:
 - Using attribute `dependsOnMethods` in `@Test` annotations.
 - Using attribute `dependsOnGroups` in `@Test` annotations.
- Important Notes on Test Dependency:
- The dependency on multiple test methods are configured for a test method by providing the comma separated dependent test method names.
- If a dependent method fails, all the subsequent test methods will be skipped, NOT failed.

Will see you in Next Lecture...

Thank you!

A close-up photograph of a hand holding a black marker, completing the cursive word 'Thank you!' on a white surface. The hand is positioned on the right side of the frame, with the index and thumb fingers visible, holding the marker. The marker's tip is just finishing the exclamation mark. The background is a plain, light-colored surface.
