

SELENIUM

.....

Handle Alerts in Selenium

Selenium: Selenium With Java Basics

- Alerts in webpage used to get the attention of the user.
- Alerts are formed using javascript inside HTML page.
- Properties of Alert :
- We cannot identify alerts using inspect tools.
- We cannot write **xpaths** for alerts.
- When alert is present on webpage we cannot proceed further without handling the popup.

Selenium: Selenium With Java Basics

- Alerts can be handled using `switchTo().alert()` method present in selenium.
- We can perform below Actions on alerts.
- Accept the Alert.
- Dismiss the Alert.
- Get the Text present on Alert.
- Send Text to Prompt of Alert.
