Implicit wait in Selenium

Selenium: Selenium With Java Basics

- **Implicit wait in Selenium** : The implicit wait will tell to the web driver to wait for certain amount of time before it throws a "No Such Element Exception".
- Default wait time of the selenium is 500 milli-seconds, implicitly wait overrides the default wait time of the selenium WebDriver.
- If element is found before implicitly wait time, selenium moves to next commands in the program without waiting to complete the implicitly wait time.
- If driver is not able to find-out the web element within the limit of implicit wait then it will throw the “No Such Element Exception”.

Will see you in Next Lecture...

Thank you!

A close-up photograph of a hand holding a black marker, completing the cursive word 'Thank you!' on a white surface. The marker is positioned at the end of the exclamation mark, and the hand is visible on the right side of the frame.
