SELENIUM

Locator in Selenium

➤ Locators : Selenium uses locators to find and match the elements of the page that it needs to interact with.

➤ In Selenium we have 8 type of locators.

➤ ID

➤ Name

➤ ClassName

➤ TagName

➤ Link Text

➤ Partial Link Text

➤ CSS Selector

➤ XPaths

➤ Priority of Locator on Selenium

➤ ID

➤ Name

➤ ClassName

➤ CSS Selector

➤ XPaths

➤ How to Find the Locator

➤ To find the Locator user needs to Open the Developer Tool of Browser.

➤ IE : Developers Tool (Tools -> Developer Tools/F12)

➤ Chrome : Right Click in WebPage -> Inspect Element/F12

➤ FireFox : RightClick any web element -> Inspect Element/F12

```html
<html>
   <body>
      <div id="pancakes">
         <a href="https://facebook.com" >Click Me</a>
         <button id="firstButton" type="button">Blueberry</button>
         <button type="button" name="Ban" class="Banana">Banana</button>
         <button type="button" name="cake" value="Strawberry">Strawberry</button>
      </div>
   </body>
</html>
```
