TestNG

TESTNG

Skipping Tests in TestNG

➤ Skip Tests : User can skip the execution of Selective Tests while executing the Test Class.

➤ Using enabled = false : If your test case is not ready to use or you want to skip the test then you just need to use enable = false with @Test annotations.

Syntax –   @Test(enabled = false)

➤ Using SkipException() : Add SKipException() statement in your test case what you want to skip and the Test will be skipped at Runtime.

Syntax –   throw new SkipException (“Declare Reason”);

See you in next lecture …
